PROFILE

SEO and content lead who builds the systems behind the content. At Vantage, a global CFD broker, I doubled organic clicks to the APAC regional Academy in five months by pairing editorial strategy with systems I designed and built: a content operations platform that runs 3,700+ Academy articles across 19 markets, from Search Console analytics to verified WordPress publishing; and an AI content workflow with fact-checking rules built in.

2× APAC regional Academy clicks in 5 months • 3,300+ page-1 queries earning clicks • One platform running 19 markets

EXPERIENCE

Assistant Content Marketing Manager | Vantage, Kuala Lumpur | March 2024 – Present

- **Organic growth ownership —** Own organic content strategy for Vantage's APAC regional Academy. Doubled its organic clicks in five months, from 476 to 961 a day.
- **Page-1 ranking —** APAC regional Academy content ranks on page 1 of Google for 3,300+ queries that earn clicks, 1,400+ of them in the top 3; 88% of query-level clicks come from page-1 rankings.
- **AI content production system** — Designed and built a Claude-based content system: versioned skills for drafting, fact-checking against the internal knowledge base and the web, and search-data-driven optimisation, with drafts staged in WordPress for review.
- **Content operations platform —** Designed and built, using Claude Code and Codex as coding agents, a full-stack platform that runs 3,700+ Academy articles across 19 markets: a WordPress-synced inventory, Search Console analytics from BigQuery, weekly opportunity scoring and traffic-drop alerts, and an internal-linking engine that audits 23,000+ links and suggests new ones from each page's own search queries.
- **Editorial pivot around market themes —** Identified gold's rally as an underserved opportunity and redirected the editorial calendar; the gold cluster now drives 20% of Vantage Academy organic clicks.
- **Continuous optimisation program —** Use Semrush organic research, competitor keyword-gap analysis, and Google Search Console data to find pages losing ground or stuck outside striking distance, refresh content and metadata, and track click recovery at 28 days against each market's trend — now run from the platform's weekly worklist.
- **Technical SEO recovery —** Diagnosed a cross-domain canonicalisation failure that caused Google to deindex preferred .com pages in favour of a regional domain; designed the remediation (301 redirects, cross-domain canonical overrides, sitemap and internal-link alignment) and established the fix pattern across the content library.

Senior Content Marketer | Vantage, Kuala Lumpur | July 2023 – March 2024

- **Content calendar** — Owned the content calendar across concurrent campaigns, coordinating SEO, design and product stakeholders to deliver on schedule.
- **Page optimisation** — Audited underperforming pages using Search Console and Semrush data and refreshed them for rankings and conversion, laying the groundwork for the Academy's systematic optimisation program.
- **Editorial prioritisation** — Identified content coverage gaps and proposed editorial priority shifts.

Content Writer | Vantage, Kuala Lumpur | August 2022 – July 2023

- **SEO content** — Wrote long-form SEO articles, ad copy, infographics and social assets on CFD and trading topics, structured for search from the first draft; several still rank and drive traffic today.
- **On-page SEO** — Applied on-page SEO practices across the blog, building the content foundation that Vantage's operation has since scaled on.

- **Campaign copywriting —** Handle copy requests from marketing, product and regional teams: landing pages, eDMs, banners, ads and social copy, written to Vantage's brand voice and cleared through Compliance review.

Mechanical Design Engineer | Genetec Technology Automation, Malaysia | *December 2017 – February 2022*

- **Production systems design** — Designed assembly and production-line systems for client manufacturing operations, contributing to projects that improved client output by 20%.
- **Systems discipline** — Built the habits of decomposing processes, testing alternatives and documenting rigorously that now underpin the content automation systems I build.

FEATURED PROJECT

Content SEO Operations Platform — Vantage Academy *Python · PostgreSQL · Next.js · BigQuery · WordPress API · Claude Code · Codex*

Designed and built the platform that runs Vantage Academy: 3,700+ articles across 19 markets, managed in one place instead of spreadsheets. It turns Search Console data into a weekly worklist (refresh, quick win, prune, content gap) and drafts optimisations through an AI skill pipeline with fact-checking rules built in.

Nothing goes live on its own: once a draft clears manual review and, where required, Compliance sign-off, one click publishes it to WordPress in place of manual posting. Every change is confirmed on the live page and can be undone. Backed by 2,300+ automated tests and checks that trace every figure on screen to its source.

Academy Impact: Clicks roughly doubled in five months · 3,300+ queries on page 1 · the brand's highest-traffic content clusters.

SKILLS

- **SEO Strategy & Research —** Keyword research, competitor keyword-gap analysis, SERP analysis, search-intent mapping, topic clustering & pillar–cluster architecture, striking-distance keyword targeting, trend-driven content planning, cannibalisation detection.
- **On-Page & Technical SEO —** On-page optimisation, metadata optimisation & A/B testing, featured-snippet optimisation, internal-linking strategy, content audits & refreshes, canonicalisation, 301 redirect strategy, sitemap management, cross-domain & international SEO.
- **AI & Data Systems —** Claude (skills, projects & API workflows), Claude Code & Codex for agentic software development, prompt & system design, AI-assisted drafting and imagery, AI search optimisation (AI Overviews & generative engine visibility — active experimentation), Python (FastAPI), SQL (PostgreSQL, BigQuery), TypeScript / Next.js, WordPress REST API, regex-based Search Console analysis, automated reporting pipelines.
- **Tools & Platforms —** Semrush, Google Search Console, GA4, Google Trends, WordPress, Excel / Google Sheets dashboards.

EDUCATION

MEng (Hons) Mechanical Engineering, Second Class Upper — University of Nottingham Malaysia*2017*
